Stocks of Grains in All Positions

U.S. DEPT. OF AGRICULTURE
LIBRARY
AUG 1 5 1962
CURRENT SERIAL RECORDS

July 24, 1962

FEED GRAIN AND WHEAT STOCKS DECLINE

July 1 stocks of feed grains and wheat were significantly below the previous year. This is the first decline shown by feed grains for July 1 since 1952. Corn accounted for the major decline with a 12 percent drop below the July record holdings of a year ago. Barley showed the sharpest percentage decline for the feed grains, with 20 percent smaller stocks, followed by a 15 percent decrease in oats and 1 percent smaller sorghum grain stocks. The decline registered by each of the feed grains gave an accumulated decrease of 10 percent in total feed grain tonnage. Carryout stocks of wheat were 8 percent below the record stocks of the previous year and rye holdings were only slightly more than one-half the previous year and the smallest since 1957. The only commodity to show increased holdings from a year ago was soybeans with stocks of 156 million bushels. Flaxseed stocks were a third smaller than the previous year and the second smallest of record.

All Wheat stocks in all storage positions on July 1 totaled 1,304 million bushels--8 percent below last year's record stocks but 51 percent greater than the 10-year (1951-60) average July 1 carryover. Stores of wheat on hand July 1 were 6 percent greater than the 1961 production of wheat. Off-farm wheat stocks were 1,202 million bushels and those stored on farms amounted to 102 million. Wheat owned by the Government constituted more than 80 percent of the carryover stocks. Disappearance of wheat from all storage positions during the April-June quarter was 337 million bushels, a record disappearance for the quarter.

Durum Wheat stocks were estimated at 5.0 million bushels on July 1 compared with 12.7 million bushels on April 1 of this year.

Rye stocks in all storage positions totaled 7.9 million bushels, 45 percent smaller than a year earlier and 24 percent below average. Stocks in both farm and off-farm storage decreased sharply. Off-farm stocks of 6.0 million bushels were 38 percent below a year earlier and 22 percent smaller than average. Farm stocks of 1.9 million bushels compares with 4.6 million bushels on July 1, 1961 and the average of 2.6 million bushels. Disappearance of rye during the April-June quarter totaled 6.7 million bushels.

UNITED STATES DEPARTMENT OF AGRICULTURE
Statistical Reporting Service
Crop Reporting Board
Washington, D. C.
GrLg 11-1 (7-62)

Corn stored in all positions on July 1 totaled 2,487 million bushels--12 percent below the 2,816 million held a year earlier. The July 1962 stocks, although 46 percent above the 1951-60 average, mark the first downward movement since July 1952. The 1961 corn crop was 7 percent less than a year earlier but the lower production was nearly offset by a record carryover of corn. Disappearance of corn has exceeded previous years in each of the first three quarters of the 1961 corn marketing year. Total off-farm stocks of 936 million bushels were nearly one-third below July 1961 although the quantity owned by CCC dropped 44 percent. Farm stocks of 1,551 million bushels were 7 percent above a year earlier.

Oats stocks in all positions totaled 276 million bushels, 15 percent below July 1, 1961 and 4 percent under the 10-year average. July 1 farm stocks were 15 percent smaller than a year ago and the 48 million bushels in off-farm storage were down 16 percent. Oats owned by CCC accounted for about 5 percent of the July 1 total. Disappearance of oats from all storages during the April-June quarter was 218 million bushels, only 2 million bushels more than the record low disappearance of 216 million bushels in 1960. The 1951-60 average disappearance for the April-June quarter is 268 million bushels.

Barley stocks on July 1 at 122.4 million bushels were down 20 percent from a year ago but still slightly above average. Compared with a year ago farm stocks were down more than a fourth while off-farm stocks were down only 14 percent. About one-fourth of the July 1 stocks were owned by CCC. Disappearance of barley from all storages during the April-June quarter at 93 million bushels was about equal the same period a year ago.

Sorghum grain stocks in all positions on July 1 at 744 million bushels were 1 percent less than the record high of 754 million on hand a year earlier. Off-farm stocks totaled 704 million bushels, nearly 1 percent above July 1, 1961, with CCC owned grain making up about 98 percent of the off-farm holdings. Farm stocks of 40 million bushels were 27 percent below last year's record total of 54 million bushels. Disappearance from all storage positions during the April-June quarter was a record 109 million compared to 106 million for the same period a year earlier and the previous high of 108 million in 1960.

Flaxseed stocks in all storage positions on July 1 at 3.6 million bushels were down a third from a year ago and down two-thirds from the 10-year average. This reduced carryover, however, is still somewhat above the July 1, 1960 record low of 3 million bushels. Almost two-thirds of the total stocks were in off-farm positions. Disappearance of flaxseed during the year ending July 1 based on ending stocks was 23.6 million bushels from a supply of 27.1 million bushels. During this period, crushings amounted to more than 19.0 million bushels, exports amounted to 1.6 million bushels, and about 2.2 million bushels were used for seed.

Soybean stocks in all storage positions totaled 156 million bushels, sharply above the 92 million on hand a year ago and the second largest of record. Farm stocks made up about a fourth of the total stocks.

Stocks on July 1 indicate a disappearance during the 9 month period (October 1961-June 1962) of 543 million bushels from a supply of 699 million bushels (carryover of 6 million bushels plus 1961 production of 693 million

(Continued on page 11)

2/ Off-farm total plus farm stocks.

bushels). During the period nearly 340 million bushels were processed for oil and about 129 million bushels were exported. Seed and feed are expected to total about 36 million bushels and some of the 1961 crop was crushed prior to October 1, 1961. In addition losses are expected to be larger than usual with rather extensive field losses in an area centering around northern Missouri and extending into Iowa, Illinois, Nebraska, and Kansas as prolonged winter and early spring precipitation prevented the completion of harvest. Growers attempted to salvage much of the acreage as spring weather permitted but yields were sharply reduced.

The data in this report are assembled by the Crop Reporting Board, bringing together stocks of CCC owned grains reported by the Commodity Analysis Branch of Agricultural Stabilization and Conservation Service as stored in bins, ships, and other storages under CCC control and estimates of the Crop Reporting Board for stocks on farms and at mills, elevators, warehouses, terminals, and processors.
